SPRING 2026

Discover the advantages of our NEW modular systems !

Dear business partners,

we are pleased to present our latest product series in the modular segment.

As early as 2005, we were the first company to recognize the advantages of **modular** systems with the fire protection distribution board type CMG (Celsion Modular Enclosure) and successfully established them in the market.

After intensive development work and extensive testing, the time has come: our **new German DIBt approvals** for modular fire protection enclosures — both in the 30-minute and 90-minute range — are now available and significantly simplify handling on construction sites.

Contact your responsible sales representative [HERE](#) and schedule a personal appointment to learn more about the product.

Our innovations at a glance

LX 30

Wall-mounted & floor-standing enclosure

CS 90 Modus

Floor-standing enclosure
